

You know all of those celebrities with picture-perfect locks...want to know their secret is?

It's extensions.

Seriously. Probably 80% of celebrities are wearing extensions for either length, density, or both.

Extensions are the secret to those sultry soft waves, super slick long lengths, and fullness after 40. It doesn't mean that extensions are just for the rich and famous.

If you want to add just a little va-va-voom to your current look, let's talk about some extension options.

Salon 1827

## Clip-ins hair extensions:

Temporary and are removed at night or worn for a special occasion. This is a great idea for brides who don't have enough hair for the dramatic styles they love for their big day.

## Strand by Strand:

Otherwise known as beaded, fusion/Keratin (hot or cold) or micro. It's virtually connecting hair to strands of the same diameter as the hair. It can be time-consuming for a full head but great to fill in the sides on someone with fine-textured hair at the temples.

## Tape-ins:

Instead of using a bead or keratin, it's a one-inch piece of hair; you layer on either side of the strand. Tape-ins is the least time consuming on the install. They give instant gratification.

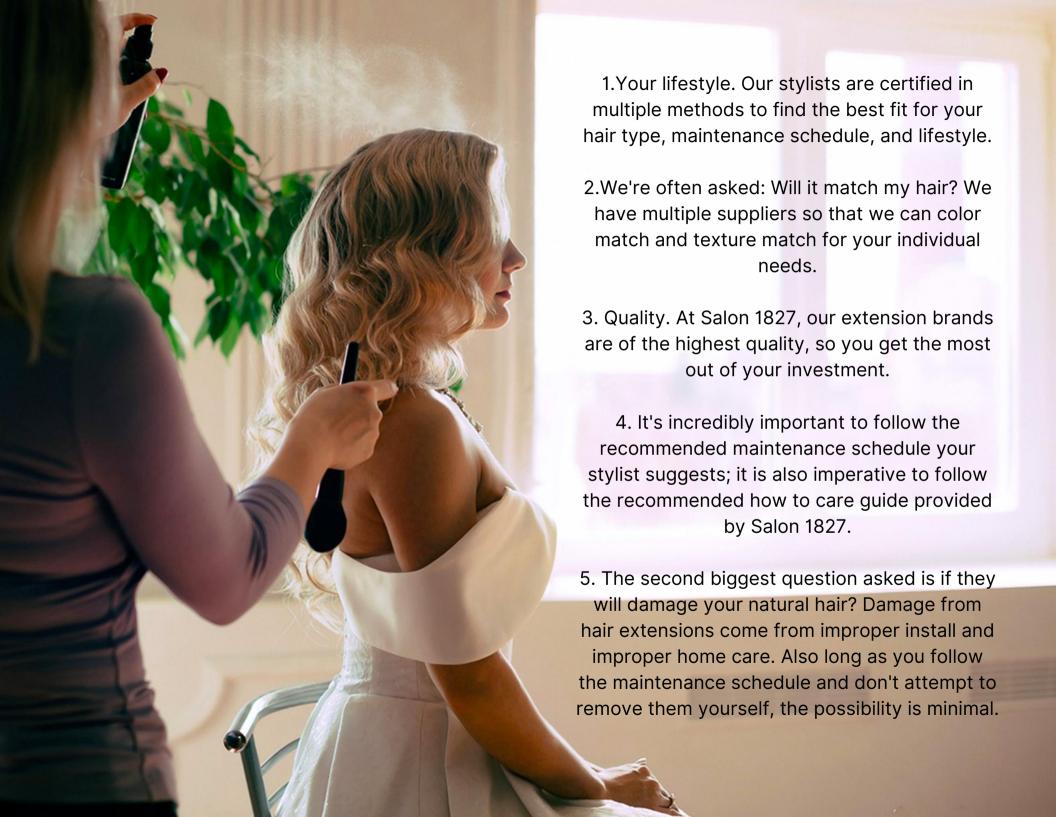

## Weft:

Wefts are long strips of hair instead of small individual pieces. They come in machine tied strips (for thicker courser hair) or hand-tied (fine to medium textured hair).

All of Salon 1827 Extension methods come in various colors and textures (yeah for curlies) but are also customizable for a seamless blend.

Already have hair extensions and have a question? Below you will find a short hair care guide. Remember, treat your extensions like you would your natural hair, just with less tension when brushing. It also needs to be washed and conditioned. Don't forget heat protectant when styling!

For most people, extensions can last 6-8 weeks. At that time, we recommended returning to have them removed, reapplied to prevent matting, and ensure the extensions are always fresh and close to the scalp.

Extensions can be applied up to \* three times for a total of 3-6 months of wear. They are 100% real hair and can be blow-dried, curled, and flat ironed. Keep in mind to use only approved products to protect your hair and the extensions.

\*depends on how well you take of them, some people prefer new hair every other application depending on the install method.

Do wait 24 hours before washing hair after application with all methods for a watertight seal.

Do use the products and brush provided for you. Most stylists include a mini kit at your first appointment to set you up for success.

Do use a leave-in conditioner concentrating on the middle and ends of the extensions to help detangle the hair and make it go quicker for you.

Do wear your hair up when swimming, exercising, and sleeping. It ensures less wear and tear on your extensions to keep them looking long and lovely.

Don't use any products containing alcohol, oil, or ethanol. Alcohol is drying and can compromise the strength of the adhesive bond.

Don't brush hair harshly. You can risk pulling the extensions out or your natural hair. Ouch!

Don't go to bed with a wet head. They won't dry, and you run the risk of other issues such as a mildew smell.

DO NOT color your hair at home! Not only does it void the warranty on a work provided, but the chemicals in hair-color break the watertight seal, and your extensions will fall out.

Don't try to remove the extensions yourself. Doing so is painful without the proper tool, and you will damage your natural hair. Please leave it to a trained pro.

Please keep in mind when requesting these services. The total price for extensions is dependent upon the desired outcome. If you are looking to add length, the extensions must match your natural hair density to avoid looking unrealistic. If you are looking to add color or fullness, less hair will be needed.
